

NEW JERSEY CENTER  
FOR TEACHING & LEARNING

**Progressive Science Initiative® (PSI®)**

**PHYS6642: Learning & Teaching Algebra-Based Physics: Electricity & Magnetism**

**Primary Student Contact:** Yuriy Zavorotniy                      yuriy@njctl.org

**Faculty Team:**                      Dr. Bob Goodman                      bob@njctl.org  
    Dr. John Ennis                      john@njctl.org  
    Yuriy Zavorotniy                      yuriy@njctl.org  
    Katy Goodman                      katy@njctl.org

**Course Credit:** 3.0 NJCTL credits

**Dates & Times:**

This is a 3-credit, self-paced course, covering 7 modules of content. The exact number of hours that you can expect to spend on each module will vary based upon the module coursework, as well as your study style and preferences. You should plan to spend approximately 15 hours per credit working online, and up to 30 hours per credit working offline.

**Graduate Student Handbook:** [www.njctl.org/graduate-handbook/](http://www.njctl.org/graduate-handbook/)

**COURSE DESCRIPTION:**

This is the second of a three-course series which, together, are designed for those who are learning to teach Algebra-Based physics for middle school or high school students, focusing on conveying physics and mathematical concepts and understandings. Underlying themes are physics connections to everyday life, applications of mathematics in physics, problem solving, and hands-on laboratory experience. The course presents physics as the foundation for studying chemistry, biology and advanced mathematics. Technology serves as a tool to establish these connections through exploration, problem solving, formative assessment, presentation, and communication.

This second course is Electricity and Magnetism, which is studied for the second 40% of the year. The order of the topics has been geared towards reinforcing skills in algebra and requires no trigonometry. This is accomplished by only including problems that can be simplified to one dimensional form. While vectors are introduced, they are only added and subtracted in one dimension at a time. Connections are also developed between the analysis of motion and graphical analysis, collision problems and the solving of systems of equations.

Teachers will learn core foundational concepts in electricity and magnetism topics as well as the

pedagogical content knowledge needed to successfully teach introductory physics to students.

**STUDENT LEARNING OUTCOMES:**

Upon completion of the course, the student will be able to:

1. Demonstrate an understanding of electricity and magnetism, detailed in the module learning outcomes below.
2. Integrate PSI materials (including presentations, labs, practice problems, etc.) to support student learning and deliver effective instruction.
3. Create a social constructivist learning environment through the use of formative assessment questions, interpreting the results of this assessment to effectively facilitate student-led discussions that support deeper understanding of the content.
4. Integrate multiple attempts to demonstrate student mastery of content knowledge, as encouraged/fostered by the PSI pedagogy.
5. Implement learning plans that are aligned to NGSS standards and allow for differentiation based on the needs of learners.

**TEXTS, READINGS, INSTRUCTIONAL RESOURCES:**

**Required Texts:**

- PSI Algebra-Based Physics uses a free digital textbook accessible at: <https://njctl.org/courses/science/algebra-based-physics/>
- Participants will download SMART Notebook presentations, homework files, labs, and teacher resources from the PSI Algebra-Based Physics Course

**Recommended Texts:**

PhET (simulations) - <http://phet.colorado.edu/en/simulations/category/physics>

**COURSE REQUIREMENTS:**

In order to receive a Passing grade, the participant must complete the following course requirements:

1. Activities: A number of different learning activities will ensure participant engagement and learning in the course. These include:
  - Engage in video module lessons which demonstrate minimized direct instruction followed by frequent formative assessment
  - Completion of formative assessments aligned to learning objectives which include detailed analysis when answered incorrectly.

- Interaction with module discussion boards that allow conversation with peers and course instructors about the module’s content, delivering that content to students. Discussion boards also serve as a place to ask and answer questions related to the module’s content.
2. Short Answer Assignment: Each module requires one (1) original response to a given prompt. These prompts are typically based upon course lessons and require teachers to analyze, reflect, and make connections between the module’s content and their own classroom practice.
  3. Mastery Exercises: For each module, these multiple-choice question quizzes assess the content knowledge gained in a module. Participants have the opportunity to retake; random questions are pulled from a larger question bank on each attempt ensuring varied questions.
  4. Virtual Labs: In each module, a virtual lab write-up will be submitted. Virtual Labs are interactive lab simulations that promote a deeper understanding of the content knowledge being learned through real-world applications and analysis.
  5. Module Exam: One is completed at the end of each module. It is a culminating exam consisting of multiple choice and free response questions aligned to the standards and objectives of the module.
  6. Reflection Paper: At the end of the course, participants are required to reflect on the knowledge taught in the course, make connections, and compare/contrast their current pedagogy with new strategies gained in this assignment.
  7. Final Exam: At the end of the course, a comprehensive exam consisting of Multiple Choice and Free Response questions assesses the content knowledge learned throughout the course.

**GRADE DISTRIBUTION AND SCALE:**

**Grade Distribution:**

Module Exams	70%
Final Exam	10%
Labs	6%
Short Answer Assignments	6%
Mastery Exercises	6%
Reflection Paper	2%

**Grade Scale:**

A	93 – 100
A-	90 – 92
B+	86 – 89
B	83 – 86
B-	80 – 82

C+	77 – 79
C	73 – 76
C-	70 – 72
D	60.0 – 69.9
F	59.9 or below

**GRADING RUBRIC:**

The following rubric is used to score:

- Short Answer Assignment – 6% of grade
- Reflection Paper – 2% of grade

The minimum possible score for this rubric is 4 points, and the score will be converted to the minimum grade available in this module (which is zero unless the scale is used). The maximum score 25 points will be converted to the maximum grade.

Intermediate scores will be converted respectively and rounded to the nearest available grade. If a scale is used instead of a grade, the score will be converted to the scale elements as if they were consecutive integers.

	<b>Meets Expectation</b>	<b>Approaches Expectation</b>	<b>Below Expectation</b>	<b>Limited Evidence</b>
	<i>7 points</i>	<i>5 points</i>	<i>3 points</i>	<i>1 point</i>
<b>Content</b>	<ul style="list-style-type: none"> <li>• Demonstrates excellent knowledge of concepts, skills, and theories relevant to topic.</li> </ul>	<ul style="list-style-type: none"> <li>• Demonstrates fair knowledge of concepts, skills, and theories.</li> </ul>	<ul style="list-style-type: none"> <li>• Demonstrates incomplete or insubstantial knowledge of concepts, skills, and theories.</li> </ul>	<ul style="list-style-type: none"> <li>• Demonstrates little or no knowledge of concepts, skills, and theories.</li> </ul>
<b>Depth of Reflection</b>	<ul style="list-style-type: none"> <li>• Content is well supported and addresses all required components of the assignment.</li> </ul>	<ul style="list-style-type: none"> <li>• Content is partially supported; addresses most of the required components of the assignment.</li> </ul>	<ul style="list-style-type: none"> <li>• Content contains major deficiencies; addresses some of the required components of the assignment.</li> </ul>	<ul style="list-style-type: none"> <li>• Content is not supported and/or includes few of the required components of the assignment.</li> </ul>

<b>Evidence and Practice</b>	<ul style="list-style-type: none"> <li>Response shows strong evidence of synthesis of ideas presented and insights gained throughout the entire course. The implications of these insights for the respondent's overall teaching practice are thoroughly detailed, as applicable.</li> </ul>	<ul style="list-style-type: none"> <li>Writing is mostly clear, concise, and well organized with good sentence/paragraph construction. Thoughts are expressed in a coherent and logical manner. There are no more than five spelling, grammar, or syntax errors per page of writing.</li> </ul>	<ul style="list-style-type: none"> <li>Response is missing some components and/or does not fully meet the requirements indicated in the instructions. Some questions or parts of the assignment are not addressed. Some attachments and additional documents, if required, are missing or unsuitable for the purpose of the assignment.</li> </ul>	<ul style="list-style-type: none"> <li>Response excludes essential components and/or does not address the requirements indicated in the instructions. Many parts of the assignment are addressed minimally, inadequately, and/or not at all.</li> </ul>
	<i>4 points</i>	<i>3 points</i>	<i>2 points</i>	<i>1 point</i>
<b>Writing Quality</b>	<ul style="list-style-type: none"> <li>Writing is well-organized, clear, concise, and focused; no errors.</li> </ul>	<ul style="list-style-type: none"> <li>Some minor errors or omissions in writing organization, focus, and clarity.</li> </ul>	<ul style="list-style-type: none"> <li>Some significant errors or omissions in writing organization, focus, and clarity.</li> </ul>	<ul style="list-style-type: none"> <li>Numerous errors in writing organization, focus, and/or clarity.</li> </ul>

The following rubric is used to score:

- Labs – 6% of grade

The minimum possible score for this rubric is 2 points, and the score will be converted to the minimum grade available in this module (which is zero unless the scale is used). The maximum score of 14 points will be converted to the maximum grade.

Intermediate scores will be converted respectively and rounded to the nearest available grade. If a scale is used instead of a grade, the score will be converted to the scale elements as if they were consecutive integers.

	<b>Meets Expectation</b>	<b>Approaches Expectation</b>	<b>Below Expectation</b>	<b>Limited Evidence</b>
	<i>7 points</i>	<i>5 points</i>	<i>3 points</i>	<i>1 point</i>
<b>Completeness</b>	<ul style="list-style-type: none"> <li>Lab write-up is complete with no missing fields.</li> </ul>	<ul style="list-style-type: none"> <li>Lab write-up has 1-2 missing fields.</li> </ul>	<ul style="list-style-type: none"> <li>Lab write up has 3-5 missing fields.</li> </ul>	<ul style="list-style-type: none"> <li>There are more than 5 missing fields on the lab write-up.</li> </ul>

<b>Calculations</b>	<ul style="list-style-type: none"> <li>• All answers are calculated correctly.</li> </ul>	<ul style="list-style-type: none"> <li>• Most answers are calculated correctly, but there are 1-2 minor calculation errors.</li> </ul>	<ul style="list-style-type: none"> <li>• Most answers are calculated correctly, but there are multiple minor calculation errors, or 1-2 gross miscalculations.</li> </ul>	<ul style="list-style-type: none"> <li>• There are calculation errors throughout the lab.</li> </ul>
---------------------	---	--	---	--

The remaining types of assignments are not scored using a rubric. These assignments are scored using percentage correct to assign a letter grade. The assignments in this manner are as follows:

- Mastery Exercises – 6% of grade
- Module Exams – 70% of grade
- Final Exam – 10% of grade

Mastery Exercises can be retaken as many times as desired to ensure a high score. Due to the nature of these assignments, each time they are taken, they will be composed of unique questions pulled randomly from a larger question bank.

Module and Final Exams are scored using a curve, which allows us to keep content exams rigorous. Module Exams can be retaken one time. Final Exams cannot be retaken.

**ACADEMIC STANDING:**

NJCTL has established standards for academic good standing within a student’s academic program. Students enrolled in any NJCTL online course must receive an 80 or higher to successfully complete a course and receive credit for that course. An 80 is equivalent to a GPA of 2.7 or B-. Additionally, students in an endorsement program must receive a cumulative GPA of 3.0 for all courses combined in order to successfully complete the program.

**ACADEMIC INTEGRITY:**

Students must assume responsibility for maintaining honesty in all work submitted for credit and in any other work designated by the instructor of the course. Academic dishonesty includes cheating, fabrication, facilitating academic dishonesty, plagiarism, reusing /repurposing your own work, unauthorized possession of academic materials, and unauthorized collaboration.

**CITING SOURCES WITH APA STYLE:**

All students are expected to follow proper writing and APA requirements when citing in APA (based on the APA Style Manual, 6th edition) for all assignments.

**DISABILITY SERVICES STATEMENT:**

We are committed to providing reasonable accommodations for all persons with disabilities. Any student with a documented disability requesting academic accommodations should contact the Dean of Students, Melissa Axelsson, for additional information to coordinate reasonable accommodations for students with documented disabilities (melissa@njctl.org).

## NETIQUETTE:

Respect the diversity of opinions among the instructor and classmates and engage with them in a courteous, respectful, and professional manner. All posts and classroom communication must be conducted in accordance with the student code of conduct. Think before you push the Send button. Did you say just what you meant? How will the person on the other end read the words?

Maintain an environment free of harassment, stalking, threats, abuse, insults or humiliation toward the instructor and classmates. This includes, but is not limited to, demeaning written or oral comments of an ethnic, religious, age, disability, sexist (or sexual orientation), or racist nature; and the unwanted sexual advances or intimidations by email, or on discussion boards and other postings within or connected to the online classroom.

If you have concerns about something that has been said, please let your instructor know.

## CLASS SCHEDULE:

Module	Required Readings	Assignments
<b>1 – Electric Charge &amp; Force</b>	<ul style="list-style-type: none"><li>• Make claims about natural phenomena based on conservation of electric charge.</li><li>• Construct an explanation of the two-charge model of electric charge based on evidence produced through scientific practices.</li><li>• Make a qualitative prediction about the distribution of positive and negative electric charges within neutral systems as they undergo various processes.</li><li>• Challenge claims that polarization of electric charge or separation of charge must result in a net charge on the object.</li><li>• Apply Coulomb’s Law and Newton’s Second Law to solve for electric force between two charges and multiple charges.</li></ul>	<ul style="list-style-type: none"><li>• Short Answer</li><li>• Lab</li><li>• Mastery Exercises</li><li>• Module Exam</li></ul>
<b>2 – Electric Field, Potential Energy, &amp; Voltage</b>	<ul style="list-style-type: none"><li>• Predict the direction and the magnitude of the force exerted on an object with an electric charge placed in an electric field using the mathematical model of the relation between an electric force and an electric field.</li><li>• Calculate any one of the variables — electric force, electric charge, electric field and electric potential — at a point given the values and sign or direction of the other two quantities.</li><li>• Explain the inverse square dependence of the electric field surrounding a spherically symmetric electrically charged object.</li><li>• Relate the electric field to the gravitational field.</li><li>• Calculate the work required to move a charge in an electric field.</li></ul>	<ul style="list-style-type: none"><li>• Short Answer</li><li>• Lab</li><li>• Mastery Exercises</li><li>• Module Exam</li></ul>

<p><b>3 – Electric Current &amp; Circuits</b></p>	<ul style="list-style-type: none"> <li>• Make predictions, using the conservation of electric charge, about the sign and relative quantity of net charge of objects or systems after various charging processes, including conservation of charge in simple circuits.</li> <li>• Choose and justify the selection of data needed to determine resistivity for a given material.</li> <li>• Formulate and justify a quantitative prediction of the effect of a change in values or arrangements of one or two circuit elements on the currents and potential differences in a circuit containing a small number of sources of emf, resistors, and switches in series and/or parallel.</li> <li>• Plan data collection strategies and perform data analysis to examine the values of currents and potential differences in an electric circuit that is modified by changing or rearranging circuit elements, including sources of emf, and resistors.</li> <li>• Calculate current, resistance and Voltage using Ohm’s Law. Differentiate between series and parallel circuits and solve mixed circuit problems.</li> </ul>	<ul style="list-style-type: none"> <li>• Short Answer</li> <li>• Lab</li> <li>• Mastery Exercises</li> <li>• Module Exam</li> </ul>
<p><b>5 – Magnetism</b></p>	<ul style="list-style-type: none"> <li>• Apply mathematical routines to express the force exerted on a moving charged object by a magnetic field.</li> <li>• Create a verbal or visual representation of a magnetic field around a long straight wire or a pair of parallel wires.</li> <li>• Describe the orientation of a magnetic dipole placed in a magnetic field in general and the particular cases of a compass in the magnetic field of the Earth and iron filings surrounding a bar magnet.</li> <li>• Use right-hand rules to analyze a situation involving a current-carrying conductor and a moving electrically charged object to determine the direction of the magnetic force exerted on the charged object due to the magnetic field created by the current-carrying conductor.</li> </ul>	<ul style="list-style-type: none"> <li>• Short Answer</li> <li>• Lab</li> <li>• Mastery Exercises</li> <li>• Module Exam</li> </ul>
<p><b>6 – Electromagnetic Induction</b></p>	<ul style="list-style-type: none"> <li>• Connect the strength of electromagnetic forces with the spatial scale of the situation, the magnitude of the electric charges, and the motion of the electrically charged objects involved.</li> <li>• Apply Faraday’s Law to calculate Electromotive Force.</li> <li>• Apply Lenz’s Law to determine induced current.</li> <li>• Construct an explanation of the function of a</li> </ul>	<ul style="list-style-type: none"> <li>• Short Answer</li> <li>• Lab</li> <li>• Mastery Exercises</li> <li>• Module Exam</li> </ul>

	<p>simple electromagnetic device in which an induced emf is produced by a changing magnetic flux through an area defined by a current loop (i.e., a simple microphone or generator) or of the effect on behavior of a device in which an induced emf is produced by a constant magnetic field through a changing area.</p>	
<b>7 - Capacitors</b>	<ul style="list-style-type: none"> <li>• Discuss the uses of capacitors.</li> </ul>	<ul style="list-style-type: none"> <li>• Short Answer</li> <li>• Lab</li> <li>• Mastery Exercises</li> <li>• Module Exam</li> </ul>
<b>8 – Final Reflection</b>	<ul style="list-style-type: none"> <li>• Review topics as desired (recommended)</li> <li>• Zoom meeting with instructor</li> </ul>	<ul style="list-style-type: none"> <li>• Discussion Board</li> <li>• Reflection Paper</li> <li>• Final Exam</li> </ul>
